

Yes, it's real.

Thyroid cancer affects three times more women than men. Usually, it's treatable.

How to find it? The first step is a **neck check**.

It's that simple.

Next time you see your doctor, ask for a neck check. Remember, early detection saves lives. So does prompt treatment plus lifelong follow-up.

And, if you or someone you know has thyroid cancer, free information and support services are as close as your phone or your computer.
