226 Keynote - Managing PTSD and anxiety following a cancer diagnosis: Effective strategies to navigate. Studies show more than	
35 percent of cancer survivors experience feelings of Post-Traumatic Stress (PTS). PTS is similar to post-traumatic stress disorder	
(PTSD) experienced by military veterans and survivors of natural disasters or life-threatening events. When someone in a family is	
	1 2 3 4 5
diagnosed with cancer, it affects everyone. This creates a continuous cycle of fear and anxiety, which can lead to Post-Traumatic Stress	1 2 3 4 3
or a diagnosis of PTSD. In this one-hour presentation, psychologist Dr. Ann Friedman and trauma-survivor Shawn Alex Nemeth shine a	
light on this complex issue and equip participants with evidenced-based tools to relieve fear and anxiety. Ann Friedman, PhD,	
Psychologist, and
